INTEGRATION IS OUR NATURE!

habemus!
Wir haben die Lösung

AREAS OF EXPERTISE AND TECHNOLOGY

habemus! is a competence center for electronics and electrical engineering. We provide support throughout the entire life cycle of electronic devices and systems, from development through manufacturing to product maintenance.

In the age of digital change, we strive for continuous improvement. From the usual electronics development to innovative, digital solutions and „smart", connected products, we focus on the needs of our customers.

Our goal is to transport complex developments into simple but ingenious solutions. In addition to developing a user-friendly product, we also strive to increase our customers' project productivity.

habemus! is a think tank for innovation in the „Internet of Things", Industry 4.0 and digitalization. From idea generation and implementation to production and operation, you decide in which stage of development you want to use our know-how.

"THE SECRET TO INGENUITY IS NOT COMPLEXITY, IT'S SIMPLICITY"

Our development team already supports you in the realization of your product idea. Depending on customer requirements, we are at your disposal as a solution and system provider in various development and manufacturing stages:

HARDWARE DEVELOPMENT	SOFTWARE DEVELOPMENT	FIRMWARE DEVELOPMENT
PROJECT MANAGEMENT	TEST AND INSPECTION SYSTEMS	ELECTRONICS MANUFACTURING
X-RAY AND CT ANALYSIS	(FAST-) PROTOTYPING	CERTIFYING

DEVELOPMENT WITH SYSTEM.

ALWAYS ONE STEP AHEAD.

INNOVATIVE IDEAS. CUSTOMIZED SOLUTIONS.

CLOSE TO HARDWARE AND FRIENDLY TO USE.

HARDWARE DEVELOPMENT

If you want to develop a powerful and efficient product, you need the right hardware. habemus! is your reliable partner for the development of innovative solutions - from the first idea to the complex system.

Our development service includes the complete hardware development. Depending on your needs, we will get involved in the project as early as the feasibility study or at a later stage in the project plan.

• Feasibility study

• Functional and requirement specification

• Circuit development

• PCB layout

• Reengineering and product optimization

• Customized test and inspection systems

• EMV design

• Functional safety

• FMEA

• Construction of prototypes

SOFTWARE DEVELOPMENT

habemus! specializes in the development of intelligent, efficient and forward-looking software solutions. We ensure to develop according to the methods of software engineering. Thus we guarantee the necessary stability of our applications.

Our engineers think in systems and offer our customers more than just a code. With the most modern tools we are able to efficiently program your application.

• Development of individual software as well as software conception and software architecture

• IoT solutions

• Cloud development

• App development for smart devices

• Structured implementation of the defined requirements

• Unit tests to ensure software integrity

• Delivery and commissioning

• On request application of agile methods like SCRUM or CANBAN
